iZeeTRAX

TRANSPORT MANAGEMENT SYSTEM

iZee**TRAX**
Built for Transporters

Transport Management System

iZeeTRAX is a cloud-based transport management system (TMS) with electronic proof of delivery (EPOD) that enables the transporters to plan, assign and execute jobs with ease in real-time. The system aims at digitising business operations to reduce the hours and effort spent on manual planning or paper work. With the dashboard, planners can have an overview of their orders, job statuses and driver performances. Drivers may view and report job status through the EPOD mobile app, as well as report issues related to them.
